

Lenovo's Transparent Laptop Innovation Revealed

VOCABULARY WORDS

1. keep an eye on: (Phrase) /ki:p ən 'aɪ ɒn/ - To watch or monitor something closely.
Example: Parents need to keep an eye on their children while they play in the park.
2. transparent: (Adjective) /træns'pærənt/ - Allowing light to pass through so that objects behind can be distinctly seen.
Example: The glass is transparent, allowing us to see through it clearly.
3. innovative: (Adjective) /'ɪnə'veɪtɪv/ - Introducing or using new ideas or methods.
Example: The company is known for its innovative approach to product design.
4. detachable: (Adjective) /dɪ'tætʃəbəl/ - Able to be separated or removed from something else.
Example: The smartphone has a detachable battery, making it easy to replace when needed.
5. projected: (Adjective) /prə'dʒektɪd/ - Cast or thrown forward, often referring to an image or light.
Example: The images are projected onto a screen for everyone to see.
6. prototype: (Noun) /'prəʊtə,taɪp/ - A first or preliminary version of a device or vehicle from which other forms are developed.
Example: Engineers are currently working on a prototype of the new electric car.
7. opaque: (Adjective) /ou'peɪk/ - Not able to be seen through; not transparent.
Example: The curtains were made of thick, opaque fabric to block out the sunlight.
8. niche: (Noun) /ni:f/ - A specialized segment of the market for a particular kind of product or service.
Example: The company focuses on catering to a niche market of eco-conscious consumers.

If you're working from home, you might have some other things that you need to **keep an eye on**, like your kids, a pet, or something you're cooking. Sometimes, you have to keep looking up from your work to check that everything is okay. Now, Chinese tech company Lenovo has created something that could help you check other things without looking up from your work!

What are some examples of things people might need to keep an eye on while working from home?

Lenovo has been showing off what it says is the world's first laptop with a **transparent**, borderless screen. With this **innovative** laptop, you can look right through it, so you'll be able to see your tea cup or the TV on the other side. Even the **detachable** keyboard is transparent, with keys that are actually **projected** onto the surface.

What unique feature does Lenovo claim their laptop has?

But the company probably didn't design its ThinkBook **prototype** just for people who work from home. Lenovo suggests that it could be useful for artists or designers who want to use the drawing surface and be able to see and draw objects that would otherwise be blocked by the screen. However, the screen doesn't have to stay transparent; users can change the pixel settings to make it more and more **opaque**.

Who does Lenovo suggest could benefit from using their transparent laptop?

How can users change the appearance of the laptop's screen?

There is also a camera on the back of the 44-centimeter screen that uses artificial intelligence to identify objects that it sees and presents the results on the screen. While this all sounds like a lot of fun, some reviewers have said it's quite a **niche** market that the ThinkBook is designed to appeal to. Others think it's a cool idea, but Lenovo hasn't said if or when it might be available.

What additional feature does the laptop have?

What are some opinions expressed by reviewers about Lenovo's transparent laptop?

DISCUSSION

1. How would you feel about having a laptop with a see-through screen?
2. What creative ways can you think of using a transparent laptop in your daily life?
3. If you could design your own transparent laptop, what features would you include?
4. Do you think a see-through laptop could help people work more efficiently? Why or why not?
5. Imagine you're an artist. How could a transparent laptop benefit your artwork?
6. What do you think are the coolest and most useful features of Lenovo's transparent laptop?
7. Would you be interested in trying out Lenovo's transparent laptop? Why or why not?
